DISSERTATION

My research investigates the strategic agency and market valuation of transformative actions in industry positioning (Chapter 1) and networked innovation ecosystems (Chapter 2).

- In my first dissertation chapter, I examine the manner in which firms utilize acquisitions to create a more optimal industry positioning. Drawing on optimal distinctiveness theory, the chapter focuses on the agentic capability of an acquirer to navigate competitive and institutional environments and boost firm market valuation.
- My second dissertation chapter examines the resource flows in networked environments. By studying the extra-dyadic impact of an acquisition on the market reaction to acquirer's alliance partners, I theorize that a firm's market value is a function of the external resource connections, which are under the influence of an alliance partner's resource combination.

For each chapter, I developed one main paper and two additional studies in my research pipeline.

- *Paper #1*: "Using Resource Recombination to Achieve Optimal Distinctiveness"
 - *Status*: Revise-and-Resubmit (2nd Round) at *Academy of Management Journal*
- *Paper #2*: "The Influence of Resource Combination on Resource Connections"
 - *Status*: In preparation for submission to *Academy of Management Journal*
